Semester control Number of hours (total: including lectures / practical)			
Number of hours (total: including lectures / practical) English			
Including lectures / practical) English Department that provides teaching Tona Balak Brief description			
Language of instruction Department that provides teaching	`	150 nours (10 lectures, 20 practical)	
Department that provides teaching Author of the discipline Brief description Requirements for the beginning of the study Brief development; basic skills of modern educational and information communications; understanding the need to develop international relations; awareness of the importance of logistics for the economic development of the state in general and the border region in particular. What will be studied Features of the functioning of logistics in modern international relations Why it is interesting / necessary to study Covers the theoretical foundations of the study of international markets for goods and services, the use of competitive advantages of the state, region, including border. Investigates the leading trends and key challenges for the functioning of logistics systems at the international, national and regional levels. Reveals the features of the world market of logistics services: transport, expeditionary, warehousing, accompanying information. Highlights the opportunities for Ukraine and its regions to participate in international logistics. Why you can learn (learning results) Why you can learn (learning results) The applicant will be able to: - know the nature and peculiarities of the countries and regions interaction at the global, regional and local levels of logistics systems; - understand and defend the national interests of Ukraine and its regions in international logistics; - know the nature and mechanisms of international communications in the field of logistics. The applicant obtains the ability to: - work in the international context in the field of logistics; - search, process and analyze of information from various sources to solve problems; - use information and communication technologies for the development of international logistics; - generate new ideas (creativity) in the market of logistics services; - apply knowledge in practical situations that arise in the global logistics system.
